The smart way to mow

World leader in robotic mowing since 1995

Scan the QR code to explore the range!

How it works

Mowing Cycle

- The concept is to maintain the lawn at an even height all year round.
- Husqvarna Automower® finds the charging station automatically.
- Charges for approximately 60 minutes.
- Resumes mowing, day in and day out, rain or shine.

Recharging

When it's time to recharge, the mower finds the charger by using one of three methods:

- Picking up a signal from the charging station antenna.
- Following the guide wire back to the charging station.
- Following the boundary wire until it's within reach of the home signal.

Boundary Wire

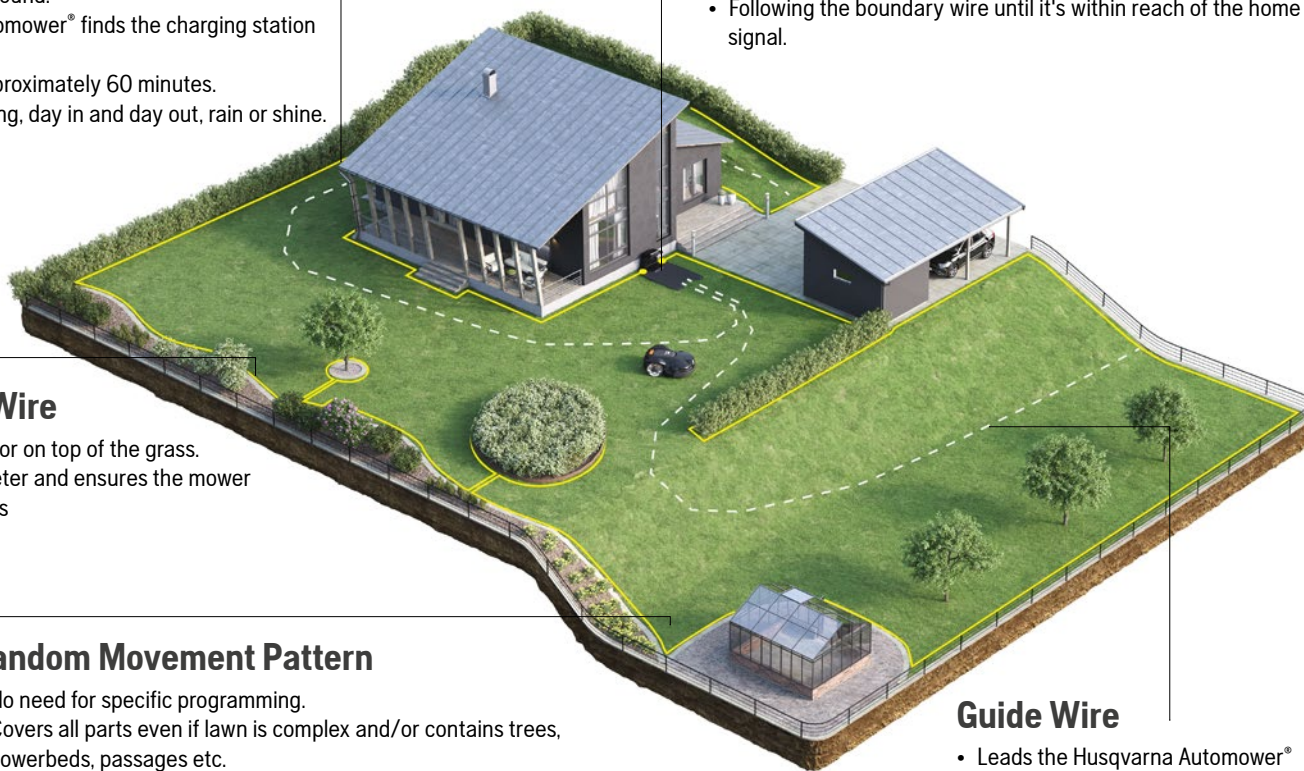

- Installed under or on top of the grass.
- Sets the perimeter and ensures the mower avoids obstacles

Random Movement Pattern

- No need for specific programming.
- Covers all parts even if lawn is complex and/or contains trees, flowerbeds, passages etc.
- Allows the grass to be cut from different directions creating a smooth carpet like surface.

Guide Wire

- Leads the Husqvarna Automower® back to the charging station.
- Guides the mower to remote areas and through narrow passages

ADVANCED NAVIGATION
